

IN5246029
Westville Water Department
2025 CONSUMER CONFIDENCE REPORT

Is our water safe?

This brochure is a snapshot of the quality of the drinking water that we provided last year. Included as part of this report are details about where the water that you drink comes from, what it contains, and how it compares to Environmental Protection Agency (EPA) and Indiana standards. We are committed to providing you with all the information that you need to know about the quality of the water that you drink.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immune-compromised people, such as people with cancer undergoing chemotherapy, people who have undergone organ transplant, people with HIV/AIDS, or other kind of immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA has set guidelines with appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants which are available from the Safe Drinking Water Hotline at (800) 426-4791.

Where does our water come from?

The Town of Westville's water comes from two wells located in the Valparaiso Moraine.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of these contaminants does not necessarily indicate that the water poses a health risk or that it is not suitable for drinking. More information about contaminants and their potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800)426-4791.

The sources of drinking water (both tap water *and* bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals, and in some cases, radioactive material, or can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in the raw, untreated water may include:

- ***Microbial Contaminants***, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- ***Inorganic Contaminants***, such as salts and metals, which can be naturally-occurring, or that result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, and mining or farming operations.
- ***Pesticides and Herbicides***, which may come from a variety of sources, such as agriculture, stormwater runoff, and residential uses.
- ***Organic Chemical Contaminants***, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production operations, and can also result from gas stations, urban stormwater runoff, and septic systems.
- ***Radioactive Contaminants***, which can be naturally-occurring or the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the EPA prescribes regulations that limit the amount of certain contaminants that may be present in the water provided by public drinking water systems. We are required to treat our water according to EPA's regulations. Moreover, FDA regulations establish limits for contaminants that may be present in bottle water, which must provide the same level of health protection for public health.

Water Quality Data

The table below lists all the contaminants that we detected during the 2025 calendar year. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise indicated, the data presented in this table is from testing done between January and December 31, 2025. The Indiana Department of Environmental Management (IDEM) requires us to monitor for certain contaminants at a frequency less than once per year because the concentration of these contaminants is not expected to vary significantly from one year to another. Some of the data, though representative of the water quality, may however be more than one year old.

Definitions

The following table contains scientific terms and measures, some of which may require explanation. Some of the terms and abbreviations used in this report are as follows:

- **Action Level Goal (ALG)** - The level of a contaminant in drinking water below which there is no known or expected risk to health ALGs allow for a margin of safety.
- **Action Level** - The concentration of a contaminant which, if associated, trigger treatment or other requirements which a water system must follow.
- **Avg.** - Regulatory compliance with some MCL's based on running annual average of monthly samples.
- **Maximum Contaminant Level or MCL** - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- **Level 1 Assessment** - A Level 1 Assessment is a study of the water system to identify potential problems and determine (if possible) total coliform bacteria have been found in our water system.
- **Maximum Contaminant Level Goal or MCLG** - The level of contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- **Level 2 Assessment** - A level 2 Assessment is a very detailed study of the water system to identify potential problems and determine (if possible), why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system of multiple occasions.
- **Minimum Residual Disinfectant Level or MRDL** - The highest level of disinfection allowed in drinking water. There is convincing evidence that neither of a disinfectant is necessary for control of microbial contaminants.
- **Maximum Residual Disinfectant Level Goal or MRDLG** - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- **N/A** - Either not available or not applicable.
- **Mrem** - Millirems per year (a measure of radiation absorbed by the body).
- **ppb** - Micrograms per liter or parts per billion – or one ounce in 7,350,000 gallons of water.
- **ppm** - Milligrams per liter or parts per million – or one ounce in 7,350 gallons of water.
- **Treatment Technique or TT** - A required process intended to reduce the level of contaminants in drinking water.

Section I – Contaminants Detected

| Inorganic Contaminants | | | | | | | | | | |
|---|--------------------------------------|--------------|------|-------|--|-------|------|--------------------|----------|---|
| | Contaminant | Action Level | MCLG | Units | 90TH Percentile: 90% of your water utility levels were less than | Min | Max | Above AI # Repeats | Violates | Likely Sources |
| 9/2025 | Copper (90 th Percentile) | 1.3 | 13 | ppm | 0.18 | 0.011 | 0.22 | | No | Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems. |
| 9/2025 | Lead* (90 th Percentile) | 15 | 0 | ppb | <0.50 | <0.50 | 0.51 | | No | Corrosion of household plumbing systems; Erosion of natural deposits. |
| *Special Note on Lead: There is no safe level of lead in drinking water. Exposure to lead in drinking water can cause serious health effects in all age groups, especially pregnant people, infants (both formula-fed and breastfed), and young children. Some of the health effects to infants and children include decreases in IQ and attention span. Lead exposure can also result in new or worsened learning and behavior problems. The children of persons who are exposed to lead before or during pregnancy may be at increased risk of these harmful health effects. Adults have increased risks of heart disease, high blood pressure, kidney or nervous system problems. Contact your health care provider for more information about your risks. | | | | | | | | | | |

| Inorganic Contaminants | | | | | | | | | | |
|------------------------|--------------------------------|-----|------|-------|------------------------|-------|-------|--------------------|----------|--|
| | Contaminant | MCL | MCLG | Units | Highest Level Detected | Min | Max | Above AI # Repeats | Violates | Likely Sources |
| 9/19/25 | Nitrate (measured as Nitrogen) | 10 | 10 | ppm | <0.1 | <0.1 | <0.1 | | No | Result from fertilizer and leaching of septic tanks, sewage; Erosion of natural deposits. |
| 8/22/25 | Total Haloacetic Acids (HAA5) | 60 | None | ppb | < 2 | < 2 | < 2 | | No | By-product of drinking water chlorination. |
| 8/22/25 | Total Trihalomethanes (TTHM) | 80 | None | ppb | 41 | 41 | 41 | | No | By-product of drinking water chlorination. |
| 10/3/24 | Fluoride | 4.0 | 4.0 | ppm | 0.14 | 0.14 | 0.14 | | No | Erosion of natural deposits. Water additive which promotes strong teeth. Discharge from fertilizer and aluminum factories. |
| 10/3/24 | Barium | 2 | 2 | ppm | 0.041 | 0.041 | 0.041 | | No | Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits. |
| 10/3/24 | Chromium | 100 | 100 | ppb | 1.8 | 1.8 | 1.8 | | No | Discharge from steel and pulp mills; Erosion of natural deposits |

| Residual Disinfectant | | | | | | | | | | |
|-----------------------|-------------------|--------|---------|-------|--------|------|------|--------------------|----------|---|
| Date | Contaminant | MCL | MCLG | Units | Result | Min | Max | Above AI # Repeats | Violates | Likely Sources |
| 2025 | Chlorine Residual | 4 MRDL | 4 MRDLG | ppm | 0.90 | 0.39 | 1.35 | | No | Water additive (disinfectant) used to control microbiological organisms |

| Unregulated Contaminants | | | | | | | | | | |
|--------------------------|-------------|------|------|-------|--------|-----|------|--------------------|----------|---|
| Date | Contaminant | MCL | MCLG | Units | Result | Min | Max. | Above AI # Repeats | Violates | Likely Sources |
| 10/3/24 | Sodium | None | None | ppm | 2.8 | | | | | Erosion of natural deposits. By-product of softener regeneration. |

| Violations | | | | |
|------------|--------------------|------------------------------------|---|--|
| Date | Analyte | Violation Type | Violation Explanation | Violation Response |
| 12/31/2025 | Lead & Copper Rule | Follow-up or Routine Tap M/R (LCR) | Failed to comply with follow-up or routine tap monitoring requirements related to lead and copper. (Did not send result sheets to IDEM) | Sent Results to IDEM late, but sent customers the results on time. |

Additional testing conducted

The Westville water was analyzed for Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) often referred to as “Forever Chemicals”. Westville Water Dept. collected samples under the U.S. EPA Unregulated Contaminants Monitoring Rule (UCMR) for 29 PFAS compounds and Lithium. This monitoring is being conducted so the EPA can receive occurrence data for these compounds to determine what additional compounds may need to be regulated in drinking water. We collected samples in March 2025 and September 2025 and did not detect any of the compounds. If you would like to view our results, contact our office at (219) 785-2123.

Watershed Protection Efforts

Our water system is working with the community to increase awareness of better waste disposal practices to further protect the source of our drinking water. We are also working with other agencies and with local watershed groups to educate the community on ways to keep our water safe.

Lead Service Inventory

We have an inventory list of each home in the town for the lines going into the house and whether they contain lead or not. Please look at this website, <https://pws-ptd.120wateraudit.com/Westville-IN>, to see if your house is correct. If you see any problems or need to make changes, contact Town Hall with these changes.

Public Involvement Opportunities

If you have any questions about the contents of this report, please contact Mr. Nathan Howell at (219) 462-7743. Or you can join us at our Town Council meetings, which are regularly held every second Tuesday in the Town Hall at 7:00 pm. We encourage you to participate and to give us your feedback.

The Town is in the process of increasing capacity and updating the existing water system. This will likely include two new wells, addition of another Iron Removal filter and addition of transmission main, as well as adding an additional elevated tower to the system. The Town is also in planning phase of replacing most of the original water system in the area from Flynn Road to Monon Street and Valparaiso Street to US 2. Additionally, replacement of water Mains on Fairview to Valparaiso Street and mains on Avenue A and B.

Because of ventilation and equipment issues fluoride addition has been halted until the project begins.

Please Share This Information

Large water volume customers (like apartment complexes, hospitals, schools and/or industries) are encouraged to post extra copies of this report in conspicuous locations or to distribute them to your tenants, residents, patients, students, and/or employees. This “good faith” effort will allow non-billed customers to learn more about the quality of the water that they consume.
